

**Marian is the only local high school who was ranked in the TOP TEN
of all Indiana high schools for College Preparedness
according to the Indiana Commission for Higher Education.**

Dual Credit Courses

Marian offers college-level classes to students while still in high school. Through a partnership with Indiana University and Ivy Tech Community College, Marian offers a variety of dual credit courses that count as both college and high school credit. This partnership provides students with a college level course at no additional cost to the student or family.

Dual Credit course content is identical to on-campus offerings and incorporates the same syllabi, class assignments, and examinations while utilizing comparable textbooks. Students taking dual credit classes meet the same academic readiness standards as students taking the course on campus. High school faculty members teaching a course for dual credit meet the credentialing requirements of the dual credit institution and the licensing requirements of the Indiana Department of Education.

Many dual credit courses at Marian are considered honors courses, and students who accept the challenge of taking these courses at Marian have the potential to earn additional grade point average points. Upon successful completion of the course, this credit can be transferred to other state colleges and universities. More information on course transfers can be found at <http://www.transferin.net/>.

Although students do not have to pay in order to be enrolled in dual credit courses with Ivy Tech, there is a modest fee to be enrolled in the dual credit course(s) that Marian has with Indiana University. Additionally, students must meet qualification criteria in order to be enrolled in the dual credit course. There are several different ways in which students can qualify for these courses. It is possible that not all students may qualify to be enrolled in a dual credit course.

- Minimum scores on PSAT
- Minimum scores on Accuplacer exam
- Minimum scores on SAT
- Minimum GPA
